

Formulation engineer

Location : Suresnes (92), France

Contract type : full time

Starting : ASAP

Phagos is on a mission to create a cleaner, more sustainable future by using bacteria's natural predator, the bacteriophage, to win the fight against antibiotic resistance and to cure infectious diseases in animal farming.

To make our vision a reality, we are looking for an excellent formulation engineer excited to join our team. You will develop Phagos formulation strategy and support our R&D team and play a major role in the company's fate and success. In collaboration with our phage biology experts and following technical, regulatory, quality and economic needs, you will be in charge of designing the formulations of our bacteriophage cocktails.

If you are looking to get in at the start of something novel and world changing, we would love to chat!

Responsibilities

- Design optimal formulations of our phage cocktails in accordance with biological and technical specifications and customers reality
- Perform product characterization, evaluate formulated product (stability, shelf life, conformity, ...), identify problems and risks and find solutions to overcome them
- Implement and follow protocols and safety guidelines to ensure a safe working environment.
- Participate in designing and optimizing the production processes with the bioproduction team
- Perform rigorous and regular scientific, regulatory, competition watch

Requirements

- Masters degree in drug design, formulation, bioproduction, industrial chemistry
- Ability and willingness to work within a fast-paced, adaptive, collaborative environment
- Sufficient experience to drive formulation projects autonomously as you will be the first non-microbiologist wetlab team member
- Knowledge of regulatory requirements is a plus
- Experience in biologicals formulation or bioproduction is a plus
- Meticulous and organized
- Self-starter and problem solver
- Fluent in english (english-speaking only work environment)
